

**SUSTAINABLE FRAMSDEN CIC
REPORT TO THE FRAMSDEN ANNUAL PARISH MEETING
APRIL 2025**

Since the last report SF have undertaken the following:

EV chargers

SF made an application on behalf of the PC for the installation of two, free EV chargers at the village hall which would have provided a modest annual income for the parish. Despite being approved by the PC an eleventh-hour objection from a small number of parishioners resulted in this being overturned and the installation did not proceed.

Free home thermal imaging

A member of SF undertook some training on the use of and interpretation of thermal imaging cameras. Access to cameras was provided free of charge by Suffolk Climate Change Partnership. On two of possibly the coldest nights of the year surveys were carried out in the village. The uptake of this free service was very poor, but hopefully of use to those who participated.

Community Energy

Work on this project continues unabated. SF have been awarded funding for a feasibility study which will take place later this year.
